

PowerNetPro Website Redesign

UI/UX Project Report

1. Project Overview

The objective of this project is to **analyze and redesign the PowerNetPro website** to improve:

- User experience (UX)
- Visual design (UI)
- Website navigation
- Product understanding
- Lead generation

The current website provides company information and products, but the overall **user experience, visual hierarchy, and trust-building elements need improvement** to meet modern B2B website standards.

The redesign will focus on creating a **professional, structured, and conversion-focused website experience**.

Problem Statement

The current website of Powernet Pro provides important company and product information, but the overall user experience is not well structured. The homepage does not clearly communicate the company's core services, which may create confusion for first-time visitors. The visual hierarchy and layout make it difficult for users to quickly identify key sections such as products, services, and contact options. Navigation and call-to-action elements are also limited, which may reduce user engagement. Additionally, trust elements like certifications, projects, and industry experience are not highlighted effectively. Because of these issues, the website may not fully support business growth or lead generation.

Problem Solution

To improve the user experience, the website should be redesigned with a clear and structured layout that communicates the company's value proposition immediately. A strong hero section, improved navigation, and better visual hierarchy will help users understand the company and its offerings more quickly. Product sections can be redesigned with images, short descriptions, and clear action buttons to improve discoverability. Adding trust signals such as certifications, completed projects, and client testimonials will strengthen credibility. Clear call-to-action buttons like "Request a Quote" or "Contact Us" should appear across the page to guide users toward enquiry actions. These improvements will create a more professional website experience and increase user engagement and conversions.

2. Current Website Analysis

After analyzing the existing website, several UX and UI issues were identified.

1. Weak First Impression

- The hero section does not clearly explain what the company does.
- Visitors may take time to understand the business.

2. Unclear Visual Hierarchy

- Text, headings, and sections are not clearly structured.
- Important information does not stand out.

3. Outdated Design

- Typography and layout feel outdated compared to modern industrial websites.
- Visual design does not reflect a strong professional brand.

4. Poor Product Presentation

- Products are not presented in a structured way.

- Product information lacks visual explanation.

5. Missing Trust Signals

Important credibility elements are missing such as:

- certifications
- client logos
- project portfolio
- testimonials

6. Navigation Issues

Users may struggle to quickly find:

- products
- services
- company information
- contact details

3. Target Users

The website mainly targets **B2B clients and technical decision makers**.

Primary Users

- Electrical contractors
- Infrastructure companies
- Industrial clients
- Government or institutional buyers

User Goals

Users visiting the website usually want to:

- understand the company
- explore available products
- verify company credibility
- request a quote
- contact the company

The website must help users achieve these goals **quickly and easily**.

4. Key UX Problems Identified

Problem	Impact
Unclear hero section	Visitors cannot quickly understand the business
Weak navigation	Users struggle to find information
Poor product structure	Products are difficult to explore
Lack of trust signals	Reduces credibility
Outdated visual design	Website feels less professional
Limited call-to-action	Reduces lead generation

5. UX Design Strategy

The redesign will follow **modern UX principles**:

1. Clear Information Hierarchy

Content will be structured so users can easily scan the page.

2. Visual Storytelling

The website will guide users through the company story.

3. Trust Building

Important credibility indicators will be highlighted.

4. Conversion Optimization

Clear **call-to-action buttons** will guide users toward contacting the company.

6. Homepage Layout Plan

The homepage will be redesigned using the following structure:

1. Header

- Logo
- Navigation
- Contact button or login

2. Hero Section

- Strong headline
- Short company description
- Call-to-action button
- Play background video

Before about company Dashboard

3. About Company

Short overview of the company and expertise.

4. Products Section

Product categories with images and descriptions.

5. Industries Served

Industries that use PowerNetPro solutions.

6. Why Choose Us

Key advantages such as:

- expertise
- reliability
- industry experience

7. Certifications & Quality Standards

Display trust indicators.

8. Client / Project Section

Showcase important projects or partnerships.

9. Contact / Call To Action

Encourage users to request a quote.

10. Footer

Contact details, links, and company information.

7. Expected Benefits

After redesign, the website should achieve:

- clearer communication of services
- improved professional appearance
- easier product exploration
- stronger credibility
- higher user engagement
- more business inquiries

| |— Mission & Vision

| |— Leadership / Team

| |— Company History

The current website structure of the company was analyzed to understand how information is organized and how users navigate through the site. The sitemap above represents the main sections and pages available on the existing website.

Website Refernces Notes

These are **UX reference principles** for designing a best website:

- Clean layout
- Minimal design
- Clear messaging
- Good illustrations
- Simple animations
- Strong brand communication
- User-friendly interface

The next step in this project is to create the detailed UI/UX wireframes and visual design for the redesigned website. These designs will focus on improving navigation, product presentation, and lead generation while maintaining a modern and professional brand identity. I have completed the UX report, sitemap, and user flow analysis. I will create the homepage wireframe and layout tomorrow and share it with you for review.
